

Amazon MQ

The screenshot shows the Amazon MQ console page in a web browser. The browser's address bar displays the URL `us-east-1.console.aws.amazon.com/amazon-mq/home?region=us-east-1#/first-run`. The page features a dark blue header with the Amazon MQ logo and a navigation sidebar on the left containing links for 'Brokers' and 'Configurations'. The main content area has a dark blue background with the text 'Application Integration' and 'Amazon MQ Fully managed open source message broker service'. Below this, a paragraph describes Amazon MQ as a managed message broker service for Apache ActiveMQ and RabbitMQ. To the right, there is a 'Create brokers' section with a 'Get started' button. Further down, a 'Benefits' section lists 'Accelerate migration' and 'Offload operations'. A 'Pricing' section explains the pay-as-you-go model and mentions the AWS Free Tier. The bottom of the image shows the Windows taskbar with various application icons and the system clock indicating 1:06 PM on ENG.

Application Integration

Amazon MQ

Fully managed open source message broker service

Amazon MQ is a managed message broker service for Apache ActiveMQ and RabbitMQ that makes it easy to set up and operate message brokers in the cloud, so you can migrate your messaging and applications without rewriting code.

Create brokers

Create message brokers in the cloud.

[Get started](#)

Benefits

Accelerate migration

Amazon MQ supports industry-standard APIs and protocols so you can migrate messaging and applications without rewriting code.

Offload operations

Amazon MQ manages the administration and maintenance of message brokers and automatically provisions infrastructure for high availability.

Pricing

With Amazon MQ, you pay only for what you use. There are no minimum fees or upfront commitments. You pay for the time your message broker instance runs, the storage you use monthly, and standard data transfer fees. It's easy to get started with Amazon MQ for the first 12 months with the [AWS Free Tier](#).

Amazon MQ – How to create a RabbitMQ message broker

The screenshot shows the Amazon MQ console in the us-east-1 region, specifically the 'Create RabbitMQ brokers' page. The left sidebar shows the 'Amazon MQ' menu with 'Brokers' and 'Configurations' options. The main content area displays a four-step wizard: Step 1 (Select broker engine), Step 2 (Select deployment mode), Step 3 (Configure settings), and Step 4 (Review and create). Step 1 is currently active, showing the 'Select broker engine' dialog. This dialog has a title 'Broker engine types' and a description: 'Select broker engine. A broker engine is a type of message broker that runs on Amazon MQ.' Below the description are two radio button options: 'Apache ActiveMQ' and 'RabbitMQ'. The 'RabbitMQ' option is selected. At the bottom right of the dialog are 'Cancel' and 'Next' buttons. The browser's address bar shows the URL 'us-east-1.console.aws.amazon.com/amazon-mq/home?region=us-east-1#/brokers/new'. The Windows taskbar at the bottom shows the search bar, a 'Luxoft' logo, and various application icons, with the system clock indicating 1:07 PM on 6/23/2023.

Deployment mode

Select deployment mode

- ☒ **Single-instance broker**
One broker in one Availability Zone. Use for development and testing, or for smaller workloads.

- ☐ **Cluster deployment**
Three single-instance brokers connected in a mesh network across multiple Availability Zones. Use for production workloads that require high availability and message durability.
